Re: American Chemical Services NPL Site - FS Groundwater Model Review

Dear Mr. Watson:

As you requested, I have enclosed a copy of Chapter 4 of the draft RI report for the ACS site. Chapter 4 concerns the physical characteristics of the site, which you believed would present sufficient information for the reviewer to make judgements concerning the validity of the assumptions, etc., presented in the modeling report. As we discussed, I will not require your comments on the modeling report until near the end of April, 1991. I may be sending you an updated version of the modeling report near the end of March, when the draft FS is due. In the meantime, if you need any additional information on the site please contact me at (312) 886-5116.

Sincerely,

Robert E. Swale Remedial Project Manager
